**DETAILED ACTION**

***Amendment***

1. Receipt is acknowledged of the amendment filed 5 October 2006, wherein applicant elected Group I (Claims 1-2, 4-17, 26-35, and 38) without traverse. Claims 18-25 and 36-37 are hereby withdrawn.

***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-2, 4-17, 26-35, and 38 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are drawn to a computer program per se. A computer program per se are abstract instructions. Therefore, a computer program is not a physical thing (product) nor a process as they are not "acts" being performed. As such, these claims are not directed to one of the statutory categories of invention (See MPEP 2106.01), but are directed to nonstatutory functional descriptive material.

It is noted that computer programs embodied on a computer readable medium or other structure, which would permit the functionality of the program to be realized, would be directed to a product and be within a statutory category of invention, so long as the computer readable medium is not disclosed as non-statutory subject matter per se (signals or carrier waves).

Art Unit: 2876

3. The claims are directed to a judicial exception; as such, pursuant to the Interim Guidelines on Patent Eligible Subject Matter (MPEP 2106)), the claims must have either physical transformation and/or a useful, concrete and tangible result. The claims fail to include transformation from one physical state to another. Although, the claims appear useful and concrete, there does not appear to be a tangible result claimed. Merely transferring the indicating data to a computer system, where the computer system is responsive to the indicating data to cause provision of assistance would not appear to be sufficient to constitute a tangible result, since the outcome of what happens after transfer of indicating data has not been used in a disclosed practical application nor made available in such a manner that its usefulness in a disclosed practical application can be realized (i.e. the provision of assistance that is caused by the computer system being responsive to the indicating data is not enumerated). As such, the subject matter of the claims is not patent eligible.
